SAFETY PRECAUTIONS

GENERAL GUIDELINES

- 1. It is advisable to insert an isolation transformer in the power line and AC supply before servicing a hot chassis.
- 2. When servicing, observe the original lead dress, especially the lead dress in the high voltage circuits. If a short circuit is found, replace all parts which have been overheated or damaged by the short circuit.
- 3. After servicing, see to it that all the protective devices such as insulation barriers, insulation papers, shields, and isolation R-C combinations, are properly installed.
- 4. Before turning the receiver on, measure the resistance between B+ line and chassis ground. Connect side of an ohmmeter to the B+ lines, and + side to chassis ground. Each line should have more resistance than specified, as follows.
- 5. When the TV set is not to be used for a long period of time, unplug the power cord from the AC outlet.

B+ Line B+ Leitung	Minimum Resistance Minimaler Widerstand
12V	Ω 008

SICHERHEITS-VORKERUNGEN

ALLGEMEINE RICHTLINIEN

- Es ist empfehlenswert, einen Trennungstransformator in die Stromversorgung zwischenzuschalten, bevor Reparaturen an einem Gerät vorgenommen werden, dessen Chassis unter Spannung steht.
- 2. Bei der Durchführung von Servicearbeiten dürfen die ursprünglichen Kabelanschlüsse nicht vertauscht werden, dies gilt insbesondere für die Anschlüsse im Hochspannungsteil. Hat sich ein Kurzschluß ereignet, dann sind alle Teile, an denen Spuren von Überhitzung sichtbar sind, auszuwechseln.
- 3. Nach Beenden der Servicearbeiten ist sicherzustellen, daß alle Sicherheitsvorrichtungen, wie Isolationsstege, Isolationspapiere, Abschirmungen und Isolations-R-C-Glieder wieder richtig eingesetzt sind.
- 4. Vor dem Einschalten des Fernsehers ist der Widerstand zwischen der B+-Leitungen und der Chassis-Masse zu prüfen. Die – Seite des Ohmmeters an die B+-Leitung, und die + -Seite an die Chassis-Masse anschließen. Jede Leitung sollte einen größeren Widerstand als die vorgeschriebenen, nachstehend aufgeführten Werte haben.
- 5. Wenn der Fernseher während längerer Zeit nicht in Betrieb gesetzt werden wird, sollte der Netzkabelstecker aus der Netzsteckdose gezogen werden.

- 6. Potentials, as high as 22.8 kV, are present when this receiver is in operation. Operation the receiver without the rear cover involves the danger of a shock hazard from the receiver power supply. Servicing should not be attempted by anyone who is not thoroughly familiar with the precautions necessary when working on high voltage equipment. Always discharge the anode of the picture tube to the receiver chassis before handling the tube.
- 7. After servicing make the following leakage current checks to prevent the customer from being exposed to shock hazards.

LEAKAGE CURRENT COLD CHECK

- 1. Unplug the AC cord and connect a jumper between the two prongs on the plug.
- 2. Turn on the receiver's power switch.
- 3. Measure the resistance value, with an ohmmeter, between the jumpered AC plug and each exposed metallic cabinet part on the receiver, such as screwheads, antennas, control shafts, handle bracket, etc. When the exposed metallic part has a return path to the chassis, the reading should be between 490 k Ω and 5.2 M Ω . When the exposed metal does not have a return path to the chassis, the reading must be ∞ .

LEAKAGE CURRENT HOT CHECK (See fig. 1.)

- 1. Plug the AC cord directly into the AC outlet. Do not use an isolation transformer for this check.
- 2. Connect a 2 k Ω , 10 watts resistor, in series with an exposed metallic part on the set and an earth such as a water pipe.
- 3. Use an AC voltmeter, with 1000 ohms/volt or more sensitivity, to measure the potential across the resistor.
- 4. Check each exposed metallic part, and measure the voltage at each point.
- 5. Reverse the AC plug in the AC outlet and repeat each of the above measurements.
- 6. The potential at any point should not exceed 1.4 volts RMS. In case a measurement is outside of the limits specified, there is a possibility of a shock hazard, and the receiver should be repaired and rechecked before it is returned to the customer.

- 6. Spannungen von bis zu 22.8 kV sind vorhanden, wenn dieser Fernseher in Betrieb ist. Die Inbetriebnahme des Fernsehers ohne aufgesetzte Rückwand bringt die Gefahr eines elektrischen Schlages von der Fernseher-Stromversorgung mit sich. Servicearbeiten sollten daher auch nie durch Personen versucht werden, die nicht in vollem Umfang mit den Sicherheitsvorkehrungen beim Umgang mit Hochspannungsgeräten vertraut sind. Vor der Handhabung der Bildröhre ist die Anode der Bildröhre immer an das Empfängerchassis zu entladen.
- Nach Beenden der Servicearbeiten sind die folgenden Kriechstrom-Prüfungen durchzuführen, um den Kunden vor der Gefahr eines elektrischen Schlages zu schützen.

MESSUNG DES KRIECHSTROMS IM ABGESCHALTETEN ZUSTAND

- Den Netzkabelstecker aus der Netzsteckdose ziehen und die beiden Steckerstifte kurzschließen.
- 2. Den Geräteschalter des Fernsehgerätes einschalten.
- 3. Mit einem Ohmmeter den Widerstandswert zwischen dem überbrückten Netzkabelstecker und jedem zugänglichen Metallteil am Gehäuse des Fernsehgerätes, wie Schraubenköpfe, Antennen, Achsen der Regler, Griffassungen usw.messen. Wenn ein zugängliches Metallteil eine Rückleitung zum Chassis hat, sollte die Anzeige zwischen $240 \, \mathrm{k} \Omega$ und $5,2 \, \mathrm{M} \Omega$ betragen.
- Wenn ein zugängliches Metallteil keine Rückleitung zum Chassis hat, muß die Anzeige ∞ betragen.

MESSUNG DES KRIECHSTROMS IM EINGESCHALTETEN ZUSTAND (Siehe Abb. 1)

- Den Netzkabelstecker direkt in eine Netzsteckdose einstecken. Für diese Messung keinen Trennungstransformator verwenden.
- 2. Einen $2k\Omega$ -, 10-Watt-Widerstand in Serie mit einem von außen zugänglichen Metallteil am Fernsehgerät und einer guten Erdung, z.B. Wasserleitung, anschließen.
- Ein Wechselstrom-Voltmeter mit einem Meßbereich von 1000 Ohm/Volt oder größer verwenden, um die Spannung über den Widerstand zu messen.
- 4. Jedes zugänglich Metallteil prüfen, und an jedem Punkt die Spannung messen.
- 5. Den Netzkabelstecker umgekehrt in die Steckdose einstecken und jede der obigen Messungen wiederholen.
- 6. Die Spannung darf an keinem der Punkte 1,4V eff. überschreiten. Wird dieser Wert nicht eingehalten, besteht die Gefahr eines elektrischen Schlages, und das Fernsehgerät sollte daher repariert und nachgeprüft werden, bevor es an den Kunden zurückgegeben wird.

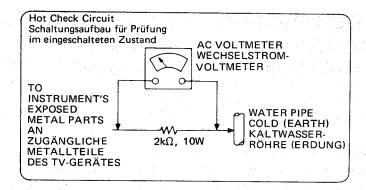

Fig. 1 Abb. 1

X-RADIATION

WARNING: 1. The potential source of X-Radiation in TV sets is the High Voltage section and the picture tube.

 When using a picture tube test jig for service, ensure that jig is capable of handling 22.8 kV without causing X-Radiation.

NOTE: It is important to use an accurate periodically calibrated high voltage meter.

- 1. Turn the Brightness control fully counterclockwise.
- 2. Set the SERVICE switch to SERVICE.
- 3. Measure the High Voltage. The meter reading should indicate 22.8 kV $^+$ $^+$ 1 5 kV. If the meter indication is out of tolerance, immediate service and correction is required to prevent the possibility of premature component failure.
- 4. To prevent an X-Radiation possibility, it is essential to use the specified picture tube.

HORIZONTAL OSC. DISABLE CIRCUIT TEST

This test must be made as a final check before the set is returned to the customer.

- 1. With the rear cover removed, supply a nominal 220V AC to the set turn on the power switch.
- 2. Set controls

 Brightness, Contrast

 Sub bright

 Minimum position
- Supply DC voltage to TPE21.
- 4. Set the voltage to 12.4V.
- 5. Confirm that the shut down circuit operates.

ROENTGENSTRAHLUNG

ACHTUNG: 1 Potentielle Quellen von Roentgenstrahlung in Fernsehgeräten sind der Hochspannungsteil und die Bildröhre.

> 2. Bei Verwendung eines Bildröhren-Prüfgerüsts für den Service ist sicherzustellen, daß es für die Bewältigung von 22,8 kV geeignet ist, ohne daß Roentgenstrahlung verursacht wird.

ANMERKUNG: Es ist wichtig, daß ein präzises, regelmäßig geprüftes Voltmeter verwendet wird.

- Den Helligkeitsregler vollständig eintgegen dem Uhrzeigersinn drehen.
- 2. Den SERVICE-Schalter in die "SERVICE"-Position stellen.
- 3. Die Hochspannung messen. Die Anzeige des Meters sollte 22.8 kV + 1.5 kV betragen. Falls die Anzeige diese Toleranzgrenzen überschreitet, ist sofortige Behebung nötig, um die Möglichkeit vorzeitigen Komponentenausfalls zu verhüten.
- 4. Um die Möglichkeit von Roentgenstrahlung zu verhindern, ist es wichtig, daß nur die vorgeschriebene Bildröhre verwendet wird.

PRÜFUNG DER HORIZONTAL-OSZILLATIONS-UNTERBRECHUNGS-SCHALTUNG

Dieser Test muß als letzte Prüfung vor der Rückgabe des Gerätes an den Kunden durchgeführt werden.

- Bei abgenommener Rückwand ist dem Gerät 220V Nennspannung zuzuführen, und der Geräteschalter einzuschalten.
- 2. Die Regler wie folgt einstellen:
 Helligkeits- und Kontrastregler Minimum
 Grundhelligkeitsregler Minimum
- 3. Gleichstrom-Voltmeter an TPE21 anschließen.
- 4. Die Spannung auf 12,4V einstellen.
- 5. Überprüfen, daß die Ausschalt-Schaltung funktioniert.

DISASSEMBLY INSTRUCTION FOR REMOTE CONTROL TRANSMITTER (TNQ1420)

COLOUR PURITY ADJUSTMENT (See Fig. 11, 12)

- 1. Place the TV receiver facing NORTH or SOUTH.
- 2. Plug in TV receiver and turn it ON.
- 3. Operate the TV receiver over 15 minutes.
- 4. Fully degauss the TV receiver by using an external degaussing coil.
- 5. Receive a crosshatch pattern and adjust the static convergence control roughly.
- 6. Loosen the clamp screw of the deflection yoke and pull the deflection yoke toward you.
- 7. Fully turn the red and blue low light controls (R357, R359) counterclockwise and set the green low light control (R358) to it's mid position.
- 8. Adjust the purity magnets so that green field is obtained at the centre of the screen. (Fig. 11)
- 9. Slowly push the deflection yoke toward bell of CRT and set it where a uniform green field is obtained.
- 10. Tighten the clamp screw of the deflection yoke.

WHITE BALANCE ADJUSTMENT (See Fig. 3)

- 1. Receive a black and white picture signal.

Screen	 	 				Minimum
Contrast	 	 			./.	Maximum
Colour	 	 	٠, .			Minimum
						Service

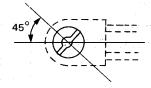

- 3. Slowly turn the screen control clockwise to the point where one of the three beams just illuminates.
- 4. Set the low light control of the colour which appeared at the step 3 as it is, and turn the remained to low light controls toward clockwise, from the setting position at the setp 3, so as to get a white horizontal line on the picture tube.
- 5. Reset the service switch to NORMAL position.
- 6. Adjust drive controls (R369, R371) to obtain a uniform white raster.

FARBREINHEITS-ABGLEICH (Siehe Abb. 11, 12)

- 1. Das Fernsehgerät gegen Norden oder Süden gerichtet aufstellen.
- 2. Das Fernsehgerät ans Netz anschließen und einschalten.
- 3. Das Fernsehgerät mehr als 15 Minuten eingeschaltet lassen
- 4. Das Fernsehgerät mit separater Entmagnetisierungspule vollständig entmagnetisieren.
- 5. Schachbrettmuster empfangen und Statik-Konvergenz-Regler grob einstellen.
- 6. Die Klemmschraube des Ablenkjochs lösen und das Ablenkjoch gegen sich ziehen.
- 7. Die Tiefenregler für Rot und Blau (R357, R359) auf Linksanschlag drehen, und den Tiefenregler für Grün (R358) auf Mitte einstellen.
- 8. Die Reinheitsmagnete so einstellen, daß im Zentrum des Bildes ein grünes Feld erscheint. (Abb. 11)
- 9. Das Ablenkungsjoch langsam in Richtung Bildschirm schieben und feststellen, wenn der ganze Bildschirm einheitlich grün ist.
- 10. Die Klemmschraube des Ablenkjochs anziehen.

WEISSBALANCE-ABGLEICH (Siehe Abb. 3)

- 1. Schwarzweiß-Bildsignal empfangen.
- 2. Die Regler wie folgt einstellen:
 Drive-Regler (R369, R371) Mitte
 Tiefenregler (R357, R358, R359) wie nachstehend

Schirmgitterregler.										Minimun
Kontrastregler										Maximun
Farbsättigungsregler										Minimun
Service-Schalter					,					Service

- 3. Den Schirmgitterregler langsam im Uhrzeigersinn drehen, bis gerade einer der drei Striche sichtbar wird.
- 4. Den Tiefenregler der Farbe, die in Schritt 3 sichtbar wurde, in seiner Stellung belassen, und die beiden anderen im Uhrzeigersinn von der Einstellung in Schritt 3 drehen, so daß auf dem Bildschirm ein weißer horizontaler Strich erscheint.
- 5. Den Service-Schalter auf "Normal" zurückstellen.
- 6. Mit den Drive-Reglern (R369, R371) ein gleichmäßig weißes Raster einstellen.

- Check the black and white picture detail for proper black and white rendition (No colouration) from lowlights to highlights and at all brightness levels for proper tracking.
 - Proper tracking at all brightness levels can be obtained when the screen control, low light controls and drive controls are properly adjusted.
 - If the results are unsatisfactory, repeat from the beginning.
- 7. Die schwarzen und weißen Bildteile sind auf exakte Schwarzweiß-Wiedergabe (keine Färbung) von den hellsten bis dunkelsten Teilen und bei allen Stellungen des Helligkeitsreglers zu prüfen.
 - Richtige Schwarzweiß-Wiedergabe bei allen Helligkeitseinstellungen wird erreicht, wenn der Schirmgitterregler, die Tiefenregler und die Drive-Regler richtig abgeglichen sind. Sind die Ergebnisse nicht zufriedenstellend, so ist mit dem Abgleich nochmals von Anfang zu beginnen.

CONVERGENCE ADJUSTMENT (See Fig. 13)

- 1. Receive a crosshatch pattern.
- Unfix the convergence magnet clamper and align red with blue cross point at the centre of the screen by rotating R, B static convergence magnets.
- 3. Align red/blue with green cross point at the centre of the screen by rotating (RB)-G static convergence magnet.
- Remove the DY wedges and slightly tilt the deflection yoke horizontally and vertically to obtain the good overall convergence.
- 5. Fix the deflection yoke by wedges.
- 6. If purity error is found, follow "Purity Adjustment" instructions.

KONVERGENZ-ABGLEICH (Siehe Abb. 13)

- 1. Ein Schachbrettmuster-Testbild empfangen.
- Die Konvergenzmagnet-Klemme lösen und die roten und blauen Punkte in der Mitte des Bildschirms durch Drehen der Statik-Konvergenzmagnete (R, B) zur Deckung bringen.
- 3. Die grünen Punkte in der Mitte des Bildschirms durch Drehen des (RB)-G-Statik-Konvergenzmagnets mit den roten/blauen Punkten zur Deckung bringen.
- 4. Die DY-Keile entfernen und das Ablenkjoch leicht horizontal und vertikal schwenken, bis gesamthaft gute Konvergenz erreicht ist.
- 5. Das Ablenkjoch mit den Keilen feststellen.
- 6. Falls ein Farbreinheitsfehler festgestellt wird, sind die Anleitungen im Abschnitt "Farbreinheits-Abgleich" zu befolgen.

Note:

- 1. Wedge A shown in Fig. 13 should be fixed within a range of $0^{\circ} \sim 30^{\circ}$ to the left of the vertical line as shown.
- 2. After inserting wedge A, insert wedges B and C. The wedges should be set 120° apart from each other.
- Be certain that the three wedges are firmly fixed and the Deflection Yoke is tightly clamped in place. Otherwise the Deflection Yoke may shift its position and cause a loss of convergence and purity.

Anmerkung:

- 1. Der in Abb. 13 gezeigte Keil A sollte innerhalb eines Bereichs von $0^{\circ} \sim 30^{\circ}$ links von der vertikalen Linie festgestellt werden, wie gezeigt.
- 2. Nach Einsetzen des Keiles A, sind die Keile B und C einzusetzen. Die Keile sollten um 120° voneinander versetzt eingesetzt werden.
- 3. Überprüfen, daß die drei Keile festsitzen, und daß das Ablenkjoch unverrutschbar festgeklemmt ist. Andernfalls könnte sich das Ablenkjoch aus seiner Position verschieben und fehlerhafte Konvergenz und Farbreinheit verursachen.

SCHEMATIC DIAGRAM FOR TUNING CONTROL

Important safety notice

Components identified by Δ mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

NOTE:

1. RESISTOR

All resistors are carbon 1/4 resistor, unless otherwise noted the following marks. Unit of resistance is OHM (Ω) (K = 1,000, M = 1,000,000).

- : Wire Wound F : Non-Flamble

2. CAPACITOR

All capacitors are ceramic 50V capacitor, unless otherwise noted the following marks. Unit of capacitance is μ F, unless otherwise noted.

- \varTheta : Bipolar

- (V) : Safety Vent
 - S : Polystyrene : Titanium Oxide • : Temp Compensation

3. Coil

Unit of inductance is μ H.

Z : Z Type

L: Lead Less components

: Dipped Tantalum

- 5. TEST POINT
- : Test point position

6. VOLTAGE MEASUREMENT

Voltage is measured by a VTVM receiving color bar signal, when all customer's controls are set to the maximum position.

- 7. When arrow mark (>>) is found, connection is easily found along with the direction of an arrow.
- 8. When schematic diagram of a board is described in more than two places, they are

IC1201 Ai0 \sim Ai1 and E0 $\phi\sim$ E03 comprise a key matrix circuits.

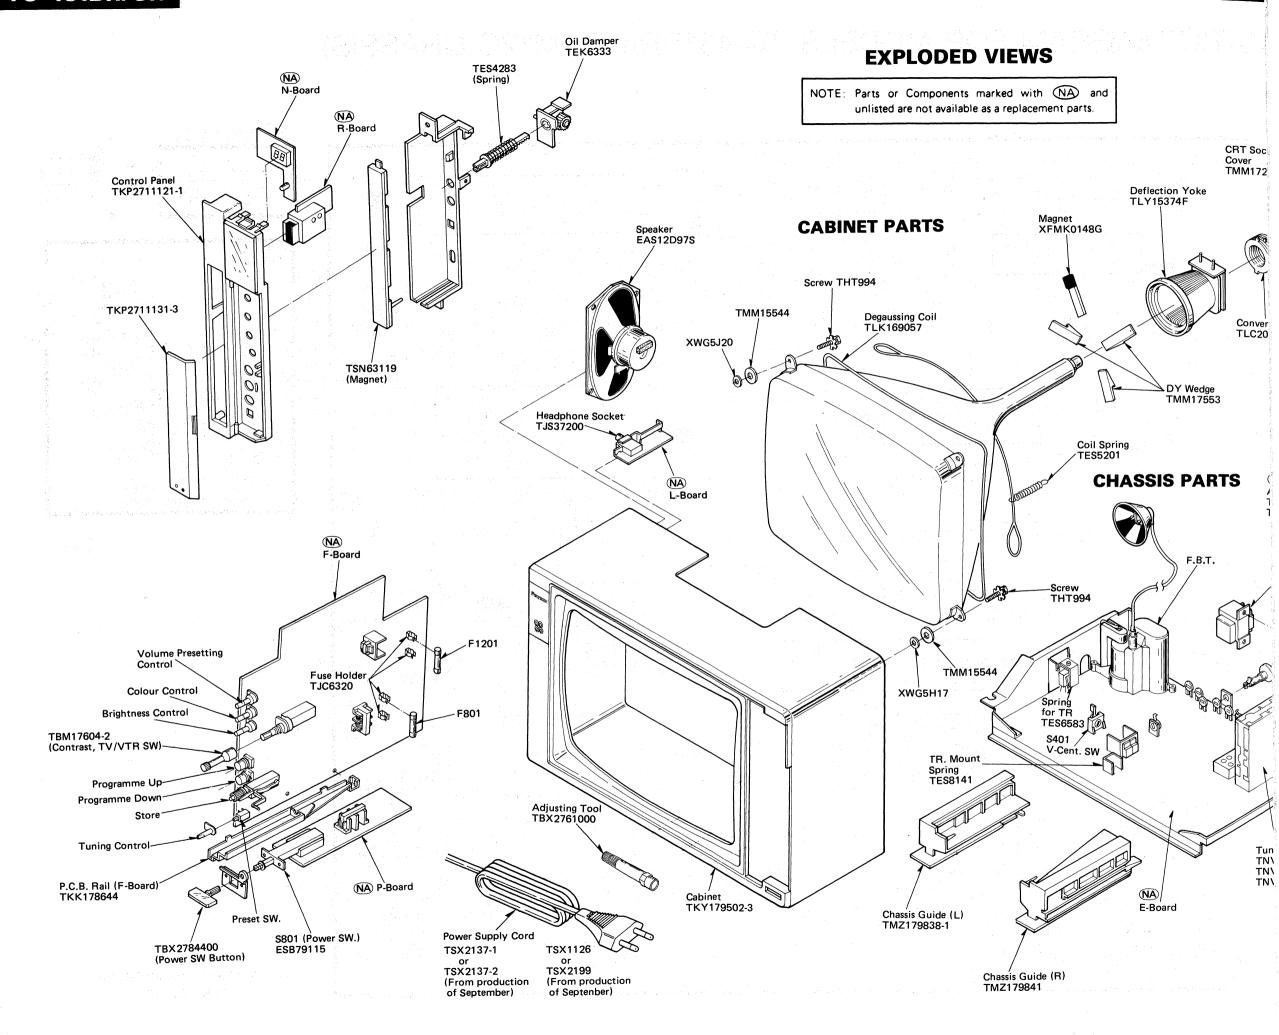

Pin	of IC1201 and Function	
OUTPUT	Αιφ (15)	Ai1 (4)
E03 32	Normalize	Memory
E01 27	Programme No. Reverse	Volume Down
E0φ 26	Programme No. Forward	Volume Up

		IC1201 MN1418BTF
Function	Pin No.	Output Signal
SOUND CONTROL	22	3.8V Sound Mid. 3.8V Sound Mid. 3.8V Sound Mute 3.8V Sound Mute 0.0V
POWER ON INPUT	29	Stand-By — more than 50msec — 5V C06 Output (8)
MUTE	1	* Channel Changing BT Voltage Connector F18 150msec 220msec 5V Mute Output pin ② of IC1203 * Power OFF by Remote Control Power ON/OFF Output ⑧ * Power ON by Remote Control (Stand-by - direct ON) Power ON/OFF Output ⑧ //deo/Sound Defeat Out Defea

SCHEMATIC DIAGRAM FOR MODELS

REPLACEMENT PARTS LIST

- Important safety notice

Components identified by Δ mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

Note:

TNP10923AD, TNP17506AB, TNP17020AA, TNP17016AC, TNP17203AA/AB and TNP65810BZ/CZ/DZ are not available as completed circuit board.
